

AVO demo

- The demos are a must at this stage
 - Serves the purpose of a review
 - Honest? Implicit promise
 - To whom?
- Aladin and workflows
 - Like data reduction with interactive tools and pipeline: how to convert interactively discovered strategy into a workflow

SWG in AVO project

- First meeting: brainstorming OK
- Second meeting: brainstorming not-OK
- Division into groups was the way to go
- Plan what is wanted from the SWG
 - Squeeze most of this out of SWG when you have it on site
 - Outside SWG meetings less can be achieved and only with a clear plan

VO compatibility

- Goal: data providers, tool developers, theoreticians providing models want to be VO compatible
- Data: not only technical compatibility
 - Surveys vs. observatories
 - VizieR

Science cases

- Select science case close to the interests of the scientist providing the day to day requirements for development
 - Danger of ‘built for themselves’
 - Will serve a specific science case, but should be developed with a wider scope

Science and the EURO-VO

- Community: good tool available!
