

# Stars, ISM and Solar System

- Assessment of demo:
  - In general terms we are positive of the demo
  - More time needed with a test version for evaluation and improvement proposals
- Stellar area project as a demo still needed ([Orion] with spectroscopic science case)
- How to present VO requirements?

# Stars, ISM and Solar System

- Comparison tool for different kind of data from different sources
- Cross-correlation tool
  - Few sources (demo)
  - Large samples statistically
- Connection/collaboration with theoretical data (atomic/molecular lines)
- Connection to standards/templates and reference objects

# Stars, ISM and Solar System

- Handling of stacks of images of a single sky position (including different instruments)
  - Variability, proper motion, faint standards
- Stellar spectral classification
